

CSE4204

LAB-2 : GLSL – Attribute, Uniform, Varying and More

Mohammad Imrul Jubair

Recap

Source: <https://www.h5w3.com/44328.html>

Canvas and WebGL context

Create and Compile Shaders

Associate the shader variable

Define geometry + color
and store it in buffer

Draw object

```
var canvas = document.getElementById("webglcanvas");
var gl = canvas.getContext("webgl");
```

```
var vertexShaderSource =
`attribute vec3 a_coords;
void main() {
    gl_Position = vec4(a_coords, 1.0);}`;
```

```
var fragmentShaderSource =
`void main() {
    gl_FragColor = vec4(1.0, 0.0, 0.0, 1.0);}`;
```

```
var vsh = gl.createShader( gl.VERTEX_SHADER );
gl.shaderSource( vsh, vertexShaderSource );
gl.compileShader( vsh );
```

```
var fsh = gl.createShader( gl.FRAGMENT_SHADER );
gl.shaderSource( fsh, fragmentShaderSource );
gl.compileShader( fsh );
```

```
var prog = gl.createProgram();
gl.attachShader( prog, vsh );
gl.attachShader( prog, fsh );
gl.linkProgram( prog );
gl.useProgram(prog);
```

```
var a_coords_location = gl.getAttribLocation(prog, "a_coords");
```

```
var coords = new Float32Array( [0.0, 0.0, 0.0,
                                0.0, 0.5, 0.0,
                                0.5, 0.0, 0.0] );
```

```
var a_coords_buffer = gl.createBuffer();
```

```
gl.bindBuffer(gl.ARRAY_BUFFER, a_coords_buffer);
gl.bufferData(gl.ARRAY_BUFFER, coords, gl.STATIC_DRAW);
gl.vertexAttribPointer(a_coords_location, 3, gl.FLOAT, false, 0, 0);
gl.enableVertexAttribArray(a_coords_location);
```

```
gl.clearColor(0.75, 0.75, 0.75, 1.0);
gl.clear(gl.COLOR_BUFFER_BIT);
gl.drawArrays(gl.TRIANGLES, 0, 3);
```

    gl_FragColor = vec4(1.0, 0.0, 0.0, 1.0);}`;
```

```
var vsh = gl.createShader( gl.VERTEX_SHADER );
gl.shaderSource( vsh, vertexShaderSource );
gl.compileShader( vsh );
```

```
var fsh = gl.createShader( gl.FRAGMENT_SHADER );
gl.shaderSource( fsh, fragmentShaderSource );
gl.compileShader( fsh );
```

```
var prog = gl.createProgram();

gl.attachShader( prog, vsh );
gl.attachShader( prog, fsh );
gl.linkProgram( prog );
gl.useProgram(prog);
```

```
var a_coords_location = gl.getAttribLocation(prog, "a_coords");
```

```
var coords = new Float32Array( [0.0, 0.0, 0.0,
                                0.0, 0.5, 0.0,
                                0.5, 0.0, 0.0] );
```

```
var a_coords_buffer = gl.createBuffer();
```

```
gl.bindBuffer(gl.ARRAY_BUFFER, a_coords_buffer);
gl.bufferData(gl.ARRAY_BUFFER, coords, gl.STATIC_DRAW);
gl.vertexAttribPointer(a_coords_location, 3, gl.FLOAT, false, 0, 0);
gl.enableVertexAttribArray(a_coords_location);
```

```
gl.clearColor(0.75, 0.75, 0.75, 1.0);
gl.clear(gl.COLOR_BUFFER_BIT);
gl.drawArrays(gl.TRIANGLES, 0, 3);
```

Problem – 1

- We want to send color information from CPU → GPU
 - Not specified inside the shader

```
var fragmentShaderSource =  
`void main() {  
    gl_FragColor = vec4(1.0, 0.0, 0.0, 1.0);  
}`;
```

Problem – 2 | Mouse Interaction

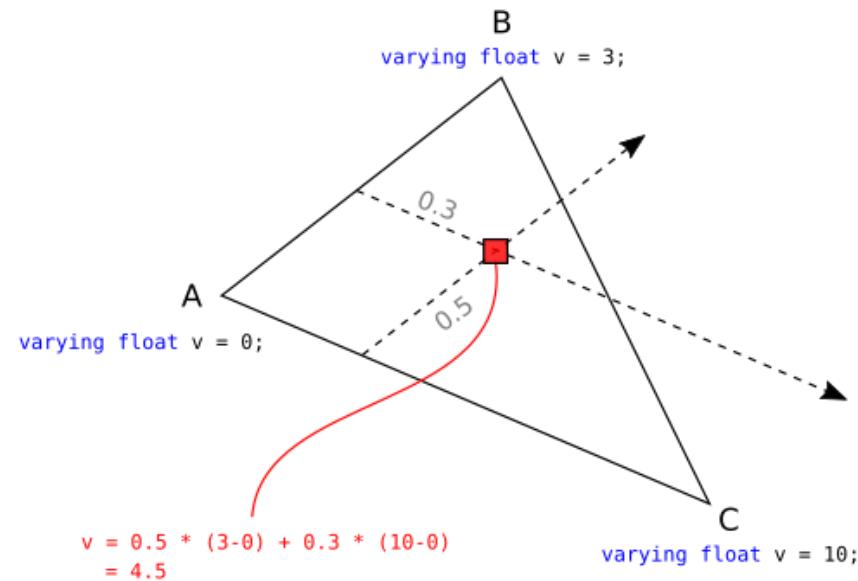

Get the code:

[rb.gy/ddbnlv](https://replit.com/@JubairHossain/DBNLV)

Problem – 3

- We want different color in different vertices and the color of the face will be blended accordingly.

Interpolation

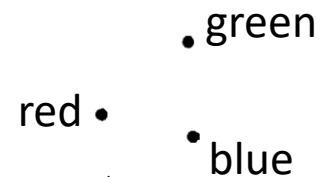

Source: <https://stackoverflow.com/questions/17537879/in-webgl-what-are-the-differences-between-an-attribute-a-uniform-and-a-varying>

Varying

```
var vertexShaderSource =  
`attribute vec3 a_coords;  
attribute vec3 a_colors;  
uniform float u_shift;  
varying vec3 v_color;  
  
void main() {  
    gl_Position = vec4(a_coords.x + u_shift, a_coords.y, a_coords.z, 1.0);  
    v_color = a_colors;  
}`;
```

```
var fragmentShaderSource =  
`precision mediump float;  
varying vec3 v_color;  
void main() {  
    gl_FragColor = vec4(v_color, 1.0);  
}`;
```

Varying

```
var vertexShaderSource =
`attribute vec3 a_coords;
attribute vec3 a_colors;
uniform float u_shift;
varying vec3 v_color;

void main() {
    gl_Position = vec4(a_coords.x + u_shift, a_coords.y, a_coords.z, 1.0);
    v_color = a_colors;
}`;
```

```
var fragmentShaderSource =
`precision mediump float;
varying vec3 v_color;
void main() {
    gl_FragColor = vec4(v_color, 1.0);
}`;
```

Varying

• green
• red
• blue

```
var vertexShaderSource =  
`attribute vec3 a_coords;  
attribute vec3 a_colors;  
uniform float u_shift;  
varying vec3 v_color;  
  
void main() {  
    gl_Position = vec4(a_coords.x + u_shift, a_coords.y, a_coords.z, 1.0);  
    v_color = a_colors;  
}`;
```

```
var fragmentShaderSource =  
`precision mediump float;  
varying vec3 v_color;  
void main() {  
    gl_FragColor = vec4(v_color, 1.0);  
}`;
```

Varying

The diagram illustrates the flow of varying variables in a OpenGL ES 2.0 shader program. It shows two code snippets: a vertex shader and a fragment shader.

Vertex Shader:

```
var vertexShaderSource =`attribute vec3 a_coords;
attribute vec3 a_colors;
uniform float u_shift;
varying vec3 v_color;

void main() {
    gl_Position = vec4(a_coords.x + u_shift, a_coords.y, a_coords.z, 1.0);
    v_color = a_colors;
}`;
```

Fragment Shader:

```
var fragmentShaderSource =`precision mediump float;
varying vec3 v_color;
void main() {
    gl_FragColor = vec4(v_color, 1.0);
}`;
```

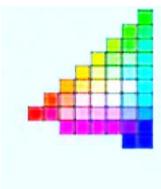

A red box labeled "Interpolation" highlights the assignment of `v_color` in the vertex shader. A curved arrow points from this assignment to the declaration of `v_color` in the fragment shader. Another curved arrow points from the declaration of `v_color` in the vertex shader to its usage in the fragment shader. Three colored dots (red, green, blue) are shown above the fragment shader, representing the interpolated color values.

Varying

```
var vertexShaderSource =  
`attribute vec3 a_coords;  
attribute vec3 a_colors;  
uniform float u_shift;  
varying vec3 v_color;  
  
void main() {  
    gl_Position = vec4(a_coords.x + u_shift, a_coords.y, a_coords.z, 1.0);  
    v_color = a_colors;  
}`;
```

• red
• green
• blue

```
var fragmentShaderSource =  
`precision mediump float;  
varying vec3 v_color;  
void main()  
{  
    gl_FragColor = vec4(v_color, 1.0);  
};`
```

Varying

```
a_colors_location = gl.getAttribLocation(prog, "a_colors");
var colors = new Float32Array( [1.0, 0.0, 0.0,
                                0.0, 1.0, 0.0,
                                0.0, 0.0, 1.0] );
                                . . .
                                . . .
                                . . .

a_colors_buffer = gl.createBuffer();
gl.bindBuffer(gl.ARRAY_BUFFER, a_colors_buffer);
gl.bufferData(gl.ARRAY_BUFFER, colors, gl.STATIC_DRAW);
gl.vertexAttribPointer(a_colors_location, 3, gl.FLOAT, false, 0, 0);
gl.enableVertexAttribArray(a_colors_location);
```

Problem – 3 | Varying Variable

Get the code:

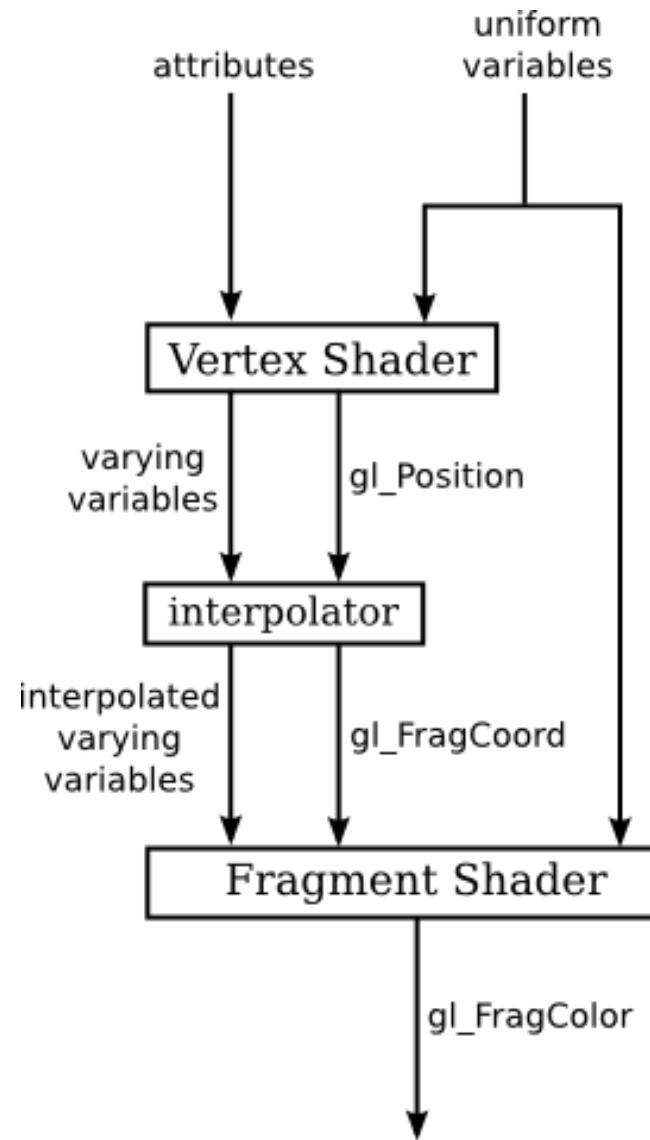

[rb.gy/p7u46I](https://repl.it/@JubairHossain/p7u46I)

Uniform vs Attribute vs Varying

- uniform are per-primitive parameters
 - constant during an entire draw call
- attribute are per-vertex parameters
 - typically : positions, normals, colors, UVs, ...
- varying are per-fragment (or per-pixel) parameters
 - they vary from pixels to pixels

Source: <https://stackoverflow.com/questions/17537879/in-webgl-what-are-the-differences-between-an-attribute-a-uniform-and-a-varying>

Flow of data

Source: <http://math.hws.edu/graphicsbook/c6/s1.html>

Notes

- Attribute can only be used in vertex shader. [why?]
- Uniform can be used in both vertex and fragment shaders. [why?]
- Varying must be used in both vertex and fragment shaders with the same name.
- Uniform, attributes and varying must be declared globally in the shaders.
- It is a convention to use –
 - **a_** before the name of the attribute variable
 - **u_** before the name of the uniform variable
 - **v_** before the name of the varying variable

Control Statements in GLSL

Question: What will happen here?

```
var vertexShaderSource =
`attribute vec3 a_coords;
attribute vec3 a_colors;
uniform float u_shift;
varying vec3 v_color;

void main() {
    if (u_shift < 0.7)
        gl_Position = vec4(a_coords.x - u_shift,
                            a_coords.y,
                            a_coords.z,
                            1.0);
    else
        gl_Position = vec4(a_coords.x,
                            a_coords.y,
                            a_coords.z,
                            1.0);

    v_color = a_colors;
}`;
```

Built-in Functions in GLSL

```
void main() {  
    gl_Position = vec4(clamp(a_coords.x - u_shift, -0.5, 1.0),  
                      a_coords.y,  
                      a_coords.z,  
                      1.0);
```

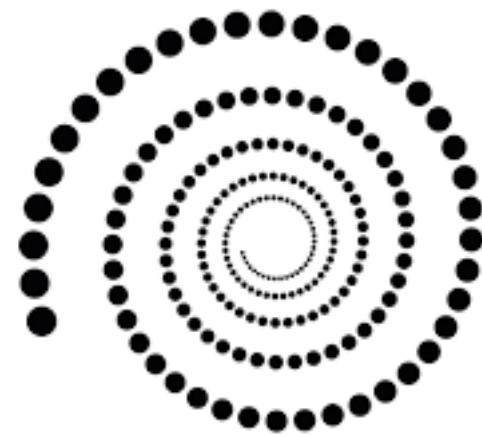

Question: What will happen here?

More GLSL built-in functions: <https://www.shaderific.com/glsl-functions>

Assignment - 1

Part A

- For each click, a 2D spiral will keep increasing.
 - The every dot will be a pixel.
 - The outer dots will be bigger than the inner ones depending on the distance from the center.

Assignment - 1

Part B

- Create a 2D scenario [use your imagination]
 - Minimum 20 triangles
- Apply color [using varying]
- Have a keyboard interaction
 - With control statements and/or built-in function

Assignment – 1

- Viva
